## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 7 and 9-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Hwu et al. (6,887,310).

Hwu et al. teach in figure 1 and related text (column 3, lines 18-37) a method comprising forming a metallic precursor 5 directly on a semiconductor substrate 1 and oxidizing said metallic precursor in a liquid oxidizer.

Regarding claims 11 and 12, Hwu et al. teach forming the metal oxide dielectric of hafnium, zirconium, or tantalum (column 5, line 13), and using physical vapor deposition to deposit the metallic film.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hwu et al. in view of Tsuzumitani et al. (6,645,807).

Art Unit: 2811

Hwu et al. teach substantially the entire claimed structure, as applied to claim 7 above, except using a liquid oxidizer selected from the group including solutions of O<sub>3</sub>, H<sub>2</sub>O<sub>2</sub> and organic peroxide.

Tsuzumitani et al. teach in figure 1 and related text forming a metal oxide dielectric 7A using a liquid oxidizer selected from the group including solutions of O<sub>3</sub>, H<sub>2</sub>O<sub>2</sub> and organic peroxide (column 7, lines 42-45).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use a liquid oxidizer selected from the group including solutions of O<sub>3</sub>, H<sub>2</sub>O<sub>2</sub> and organic peroxide, in Hwu et al.'s device, in order to use the appropriate material for the application in hand. Note that substitution of materials is not patentable even when the substitution is new and useful. *Safetran Systems Corp. v. Federal Sign & Signal Corp.* (DC NIII, 1981) 215 USPQ 979.

### ***Response to Arguments***

Applicant argues that Hwu et al. do not teach oxidizing said metallic precursor in a liquid oxidizer.

Hwu et al. explicitly state in column 3, lines 22-23 and 29-30, "to oxidize a metal to form a metallic oxide by liquid phase anodic oxidation so as to produce a high k gate dielectric". Therefore, Hwu et al. teach oxidizing said metallic precursor in a liquid oxidizer, as claimed.

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
